In the data there are three columns:

ID: When a new user signs up, a unique account id is assigned to the user
Created at: The date on which the user signs up
Video Creation date: After Signup, timestamps on which a user exports a video on our editor. If it is blank that means the user never exported a video.

We need to predict based on the first 5 weeks activity after a user signs up, which user is going to export **at least one video after 3 months of signup**.

Feel free to use any tool to attempt this. Show your thought process. The solution should be **self explanatory.**
